ГОСУДАРСТВО ПРОДАЕТ ДАННЫЕ?

Врачи общей практики должны участвовать в любой продаже данных зарубежным компаниям или использовании, спрашивая разрешение каждого пациента, поскольку они принадлежат им, даже анонимно!

Concerns raised over AI trained on 57 million NHS medical records

The makers of an AI model called Foresight say it could help predict disease or hospitalisation rates, but others have expressed concern about the fact it is trained on millions of health records

Guidance on the use of AI-enabled ambient scribing products in health and care settings

Version 1
For England only

Publication (publication)

Content

- Purpose
- Scope
- Further support
- 1. Quick implementation guide
- 2. Product details
- 3. Key Considerations
- Appendix – in-depth considerations and actions

Purpose

This guidance offers high-level information to assist those adopting ambient scribing products that feature Generative Artificial Intelligence (AI), for use across health and care settings in England. These products are sometimes referred to as ambient scribes or AI scribes and include advanced ambient voice technologies (AVTs) used for clinical or patient documentation and workflow support.

The guidance is intended for settings aiming to implement a specific product or function of an existing product. It is not meant for individuals seeking to use tools outside the supervision of their setting, such as through unauthorised applications.

Scope

The guidance provides an overview of ambient scribing products and key considerations for Chief Information Officers (CIOs) and Chief Clinical Information Officers (CCIOs) leading AI adoption in health settings.

The Appendix offers an in-depth exploration of these considerations, providing further actions for technical and product teams leading AI adoption.

Further support

This is the first in a series of documents to be published over the next six months to support the adoption of ambient scribing products. These documents will be aimed at a broader system audience and will include:

Sir Tony Blair, 72, said it was “absurd” that NHS data was not being made available to power innovation

LORNE THOMPSON/GETTY IMAGES

Tony Blair: Britain should have AI doctors and nurses

The former PM says humanity is entering its biggest transformation since the Industrial Revolution and that it’s ‘absurd’ not to do more in the NHS

Lucy Bannerman

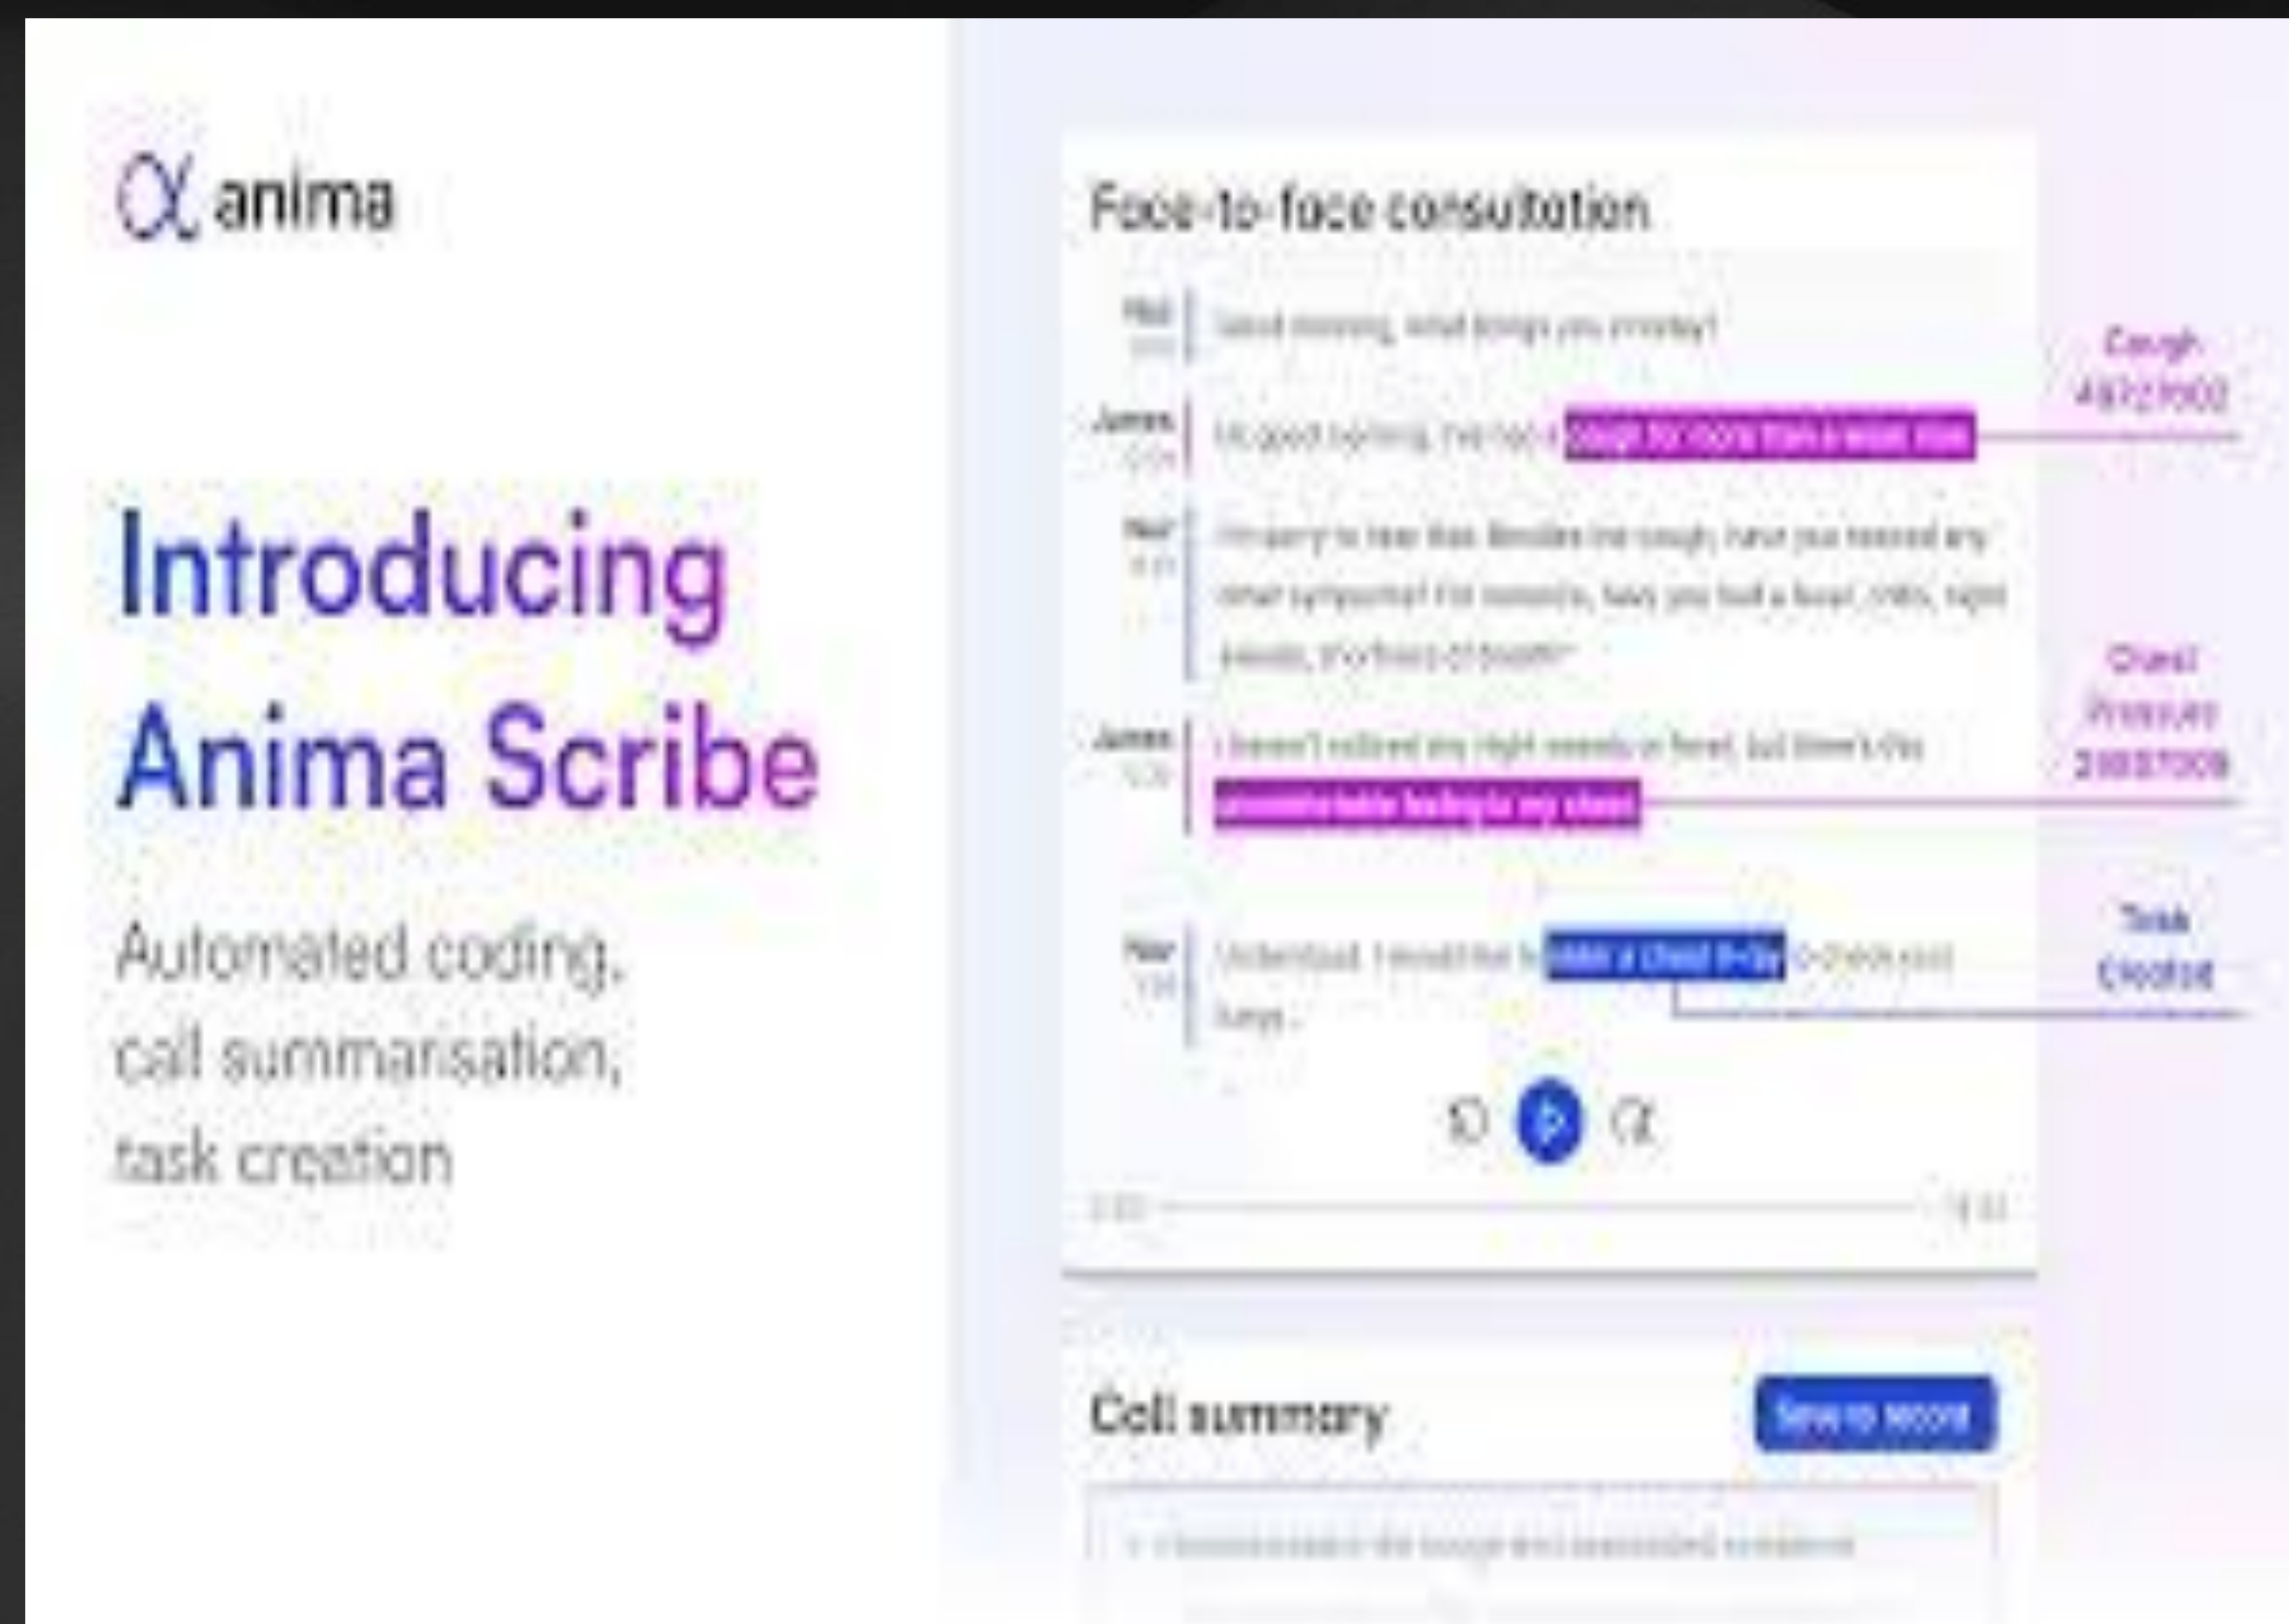

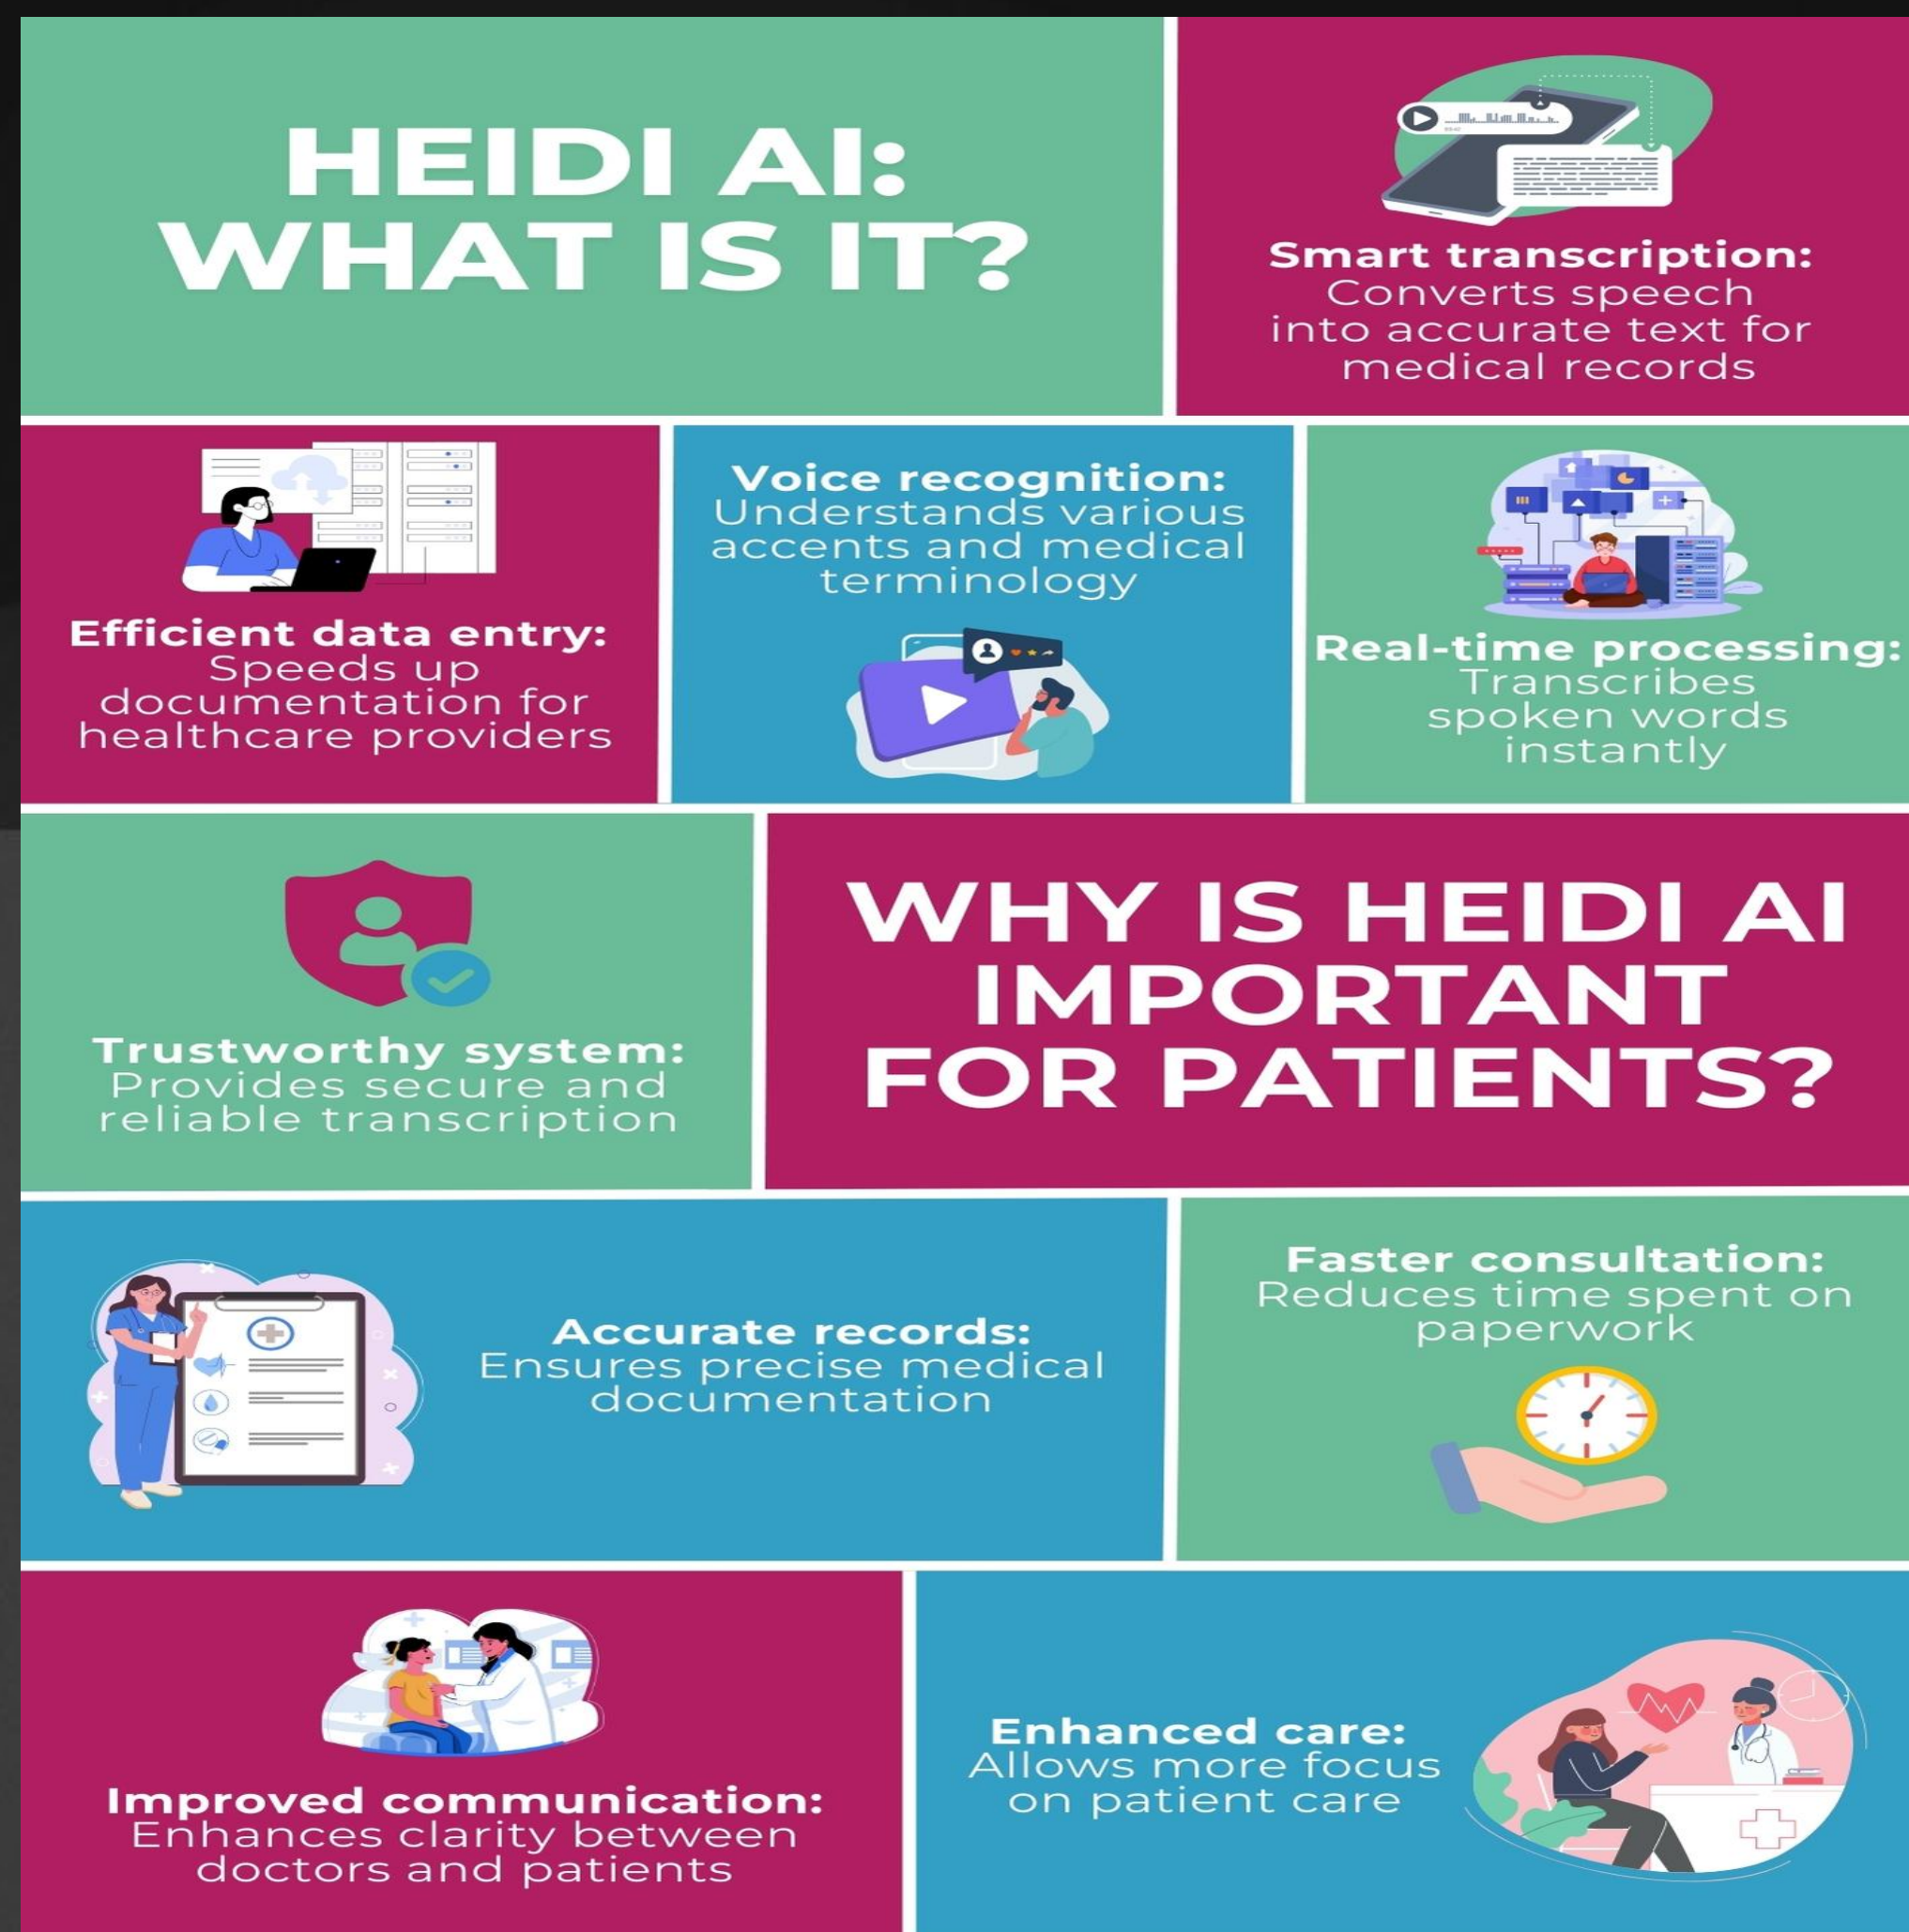

Monday June 02 2025, 8.00pm, The Times

Britain should embrace a future of AI doctors and nurses or risk being left behind in the biggest upheaval since the Industrial Revolution, Sir Tony Blair has said.

The former prime minister said that fears about artificial intelligence should be outweighed by the “absolutely transformative” impact it could have on public services like healthcare and

Patient reports a dry cough that started two weeks ago and has worsened over the past few days. She also complains of fatigue and mild shortness of breath with exertion. She has no history of similar symptoms. Her medical history includes seasonal allergies and mild asthma, which she manages with an as-needed inhaler. She does not smoke and consumes alcohol socially on occasion.

Generative Artificial Intelligence in GP Training and Workplace Based Assessment: Guidance for GP registrars and GP Educators

Renew

RCGP Guidance for GP Trainers:
Use of Generative AI by GP Trainees

Summary by eGPelearning

The RCGP has issued clear guidance on the appropriate use of generative AI within GP training. It is important to understand how trainees can and cannot use such tools during their training and assessments.

**Appropriate use**

Information Synthesis
Trainees may use AI tools to summarise clinical guidelines, curriculum topics, and educational resources. However, they must verify the accuracy of any content used.

Feedback on Written Work
AI can provide preliminary feedback on reflective entries or case-based discussions. This should be supplementary to, not a substitute for, supervisor feedback.

Reflective Practice Support
Trainees may use AI to help generate reflective prompts. However, reflections must be grounded in real patient encounters and personal experience.

Educational Content Development
AI may be used to assist in creating teaching resources such as presentations or case simulations. All materials should be reviewed for relevance and accuracy.

**Inappropriate use**

Clinical Decision-Making
Trainees must not use AI to make or simulate clinical decisions, generate diagnoses, or interpret clinical data.

Fabricated Reflections
Using AI to create reflections based on fictitious scenarios is unacceptable and undermines the integrity of reflective learning.

Using AI to complete WBPA
Entries on the trainee's behalf – submitting AI-generated work as their own without meaningful review input or reflection.

Ambient scribe use
Is not commented in the guidance or clarified in terms of use by trainees at any stage of their training

**Important Considerations**

Confidentiality: AI tools must never be fed patient-identifiable data.

Accountability: Trainees remain fully accountable for the content and quality of their submissions.

Critical Thinking: AI outputs may appear convincing but can be incorrect. Trainees must critically appraise all information.

This guidance should be incorporated into discussions during supervision and educational review sessions to ensure responsible and transparent use of generative AI in training.

AI IN GENERAL PRACTICE IS IT TIME TO BELIEVE THE HYPE?!

20th May 2025, 9am–4.15pm
Chester Racecourse | Chester | CH1 2LY

Do you and your practice teams need to know more about AI such as:

- What is being used today,
- What could be coming tomorrow, and
- What pitfalls you need to be aware of?

If yes, come along to our conference to hear more, meet AI suppliers and explore real AI solutions in practice, including:

- Seeing what products are available
- Seeing where other practices are benefitting
- Hearing lessons from early adopters
- Ensuring you understand the regulations
- Being aware of ethics and governance pitfalls.

There will also be lots of opportunities to interact with AI sponsors directly!

Click here
or scan the QR code
to book your
FREE ticket!
